REPORT.

To his Excellency, A. P. WILLARD,
Governor of the State of Indiana:

SIR:—In obedience to the requirements of the law, I have the honor to submit to you the eight annual report of the Superintendent of Public Instruction for 1859.

The school reports which were due to this department on the first Monday of November last, from the county Auditors, have been received from all the counties in the State. They show the whole number of children in the State, between the ages of five and twenty-one years, to be 495,019, being an increase over the number reported last year of 15,702. Of this number 267,5 5 attended the public schools within the year, and 12,372 attended private schools within the year. A large portion of those attending the private schools attended the public schools also, whilst they were in operation, and are included in the number above given as attending the public schools.

There are 7,233 school districts within the State; 6,475 primary schools and 73 high schools; total, 6,547; average number of pupils to each 41.

There were 6,766 teachers employed in the primary schools, of which number 5,294 were males, and 1,359 females, and 62 male and 51 female teachers were employed in the high schools.

The average compensation of male teachers has been $1 13 per day, and of female teachers 86 cents per day.

The average length of the schools has been 77 days. The length of schools appears to have been very unequal, ranging from 22 days to 246 days.

The amount expended for tuition is $421,581. The data for determining the average cost of tuition per child is very imperfectly reported, but from the best data at hand it appears to be between 50 and 55 cents per child per month.

There has been collected, by special tax, for building, furnishing and repairing school houses, fuel, rent, &c., $379,433.

There has been 666 new school houses erected within the year, at an aggregate cost of $292,820, being an average of $439 67 each. The most expensive one being in the city of Fort Wayne and costing $18,551; the second at Wabash Town, costing $15,000; the third at Goshen, costing $8,000.

The apportionment of school revenue for tuition in April, 1859, had to be made, as always heretofore, without any reliable knowledge as to the amount of revenue ready for apportionment. The effect of this has been to leave, of the amount collected for distribution at that time, $68,211 87 unapportioned and unapplied to the schools, thus defeating the legitimate purpose of its collection, to which purpose it is, by the law and the constitution, most solemnly appropriated and set apart. This amount, as I am informed by the Auditor of State, has all been used in the ordinary payments at the State Treasury, and added to similar balances of former years, which in the aggregate now amount to more than $255,000, of which sum the distributive share of each county is shown by a tabular statement in the appendix, numbered 3. And I am further informed by the Auditor of State that the condition of the State Treasury is such that no portion of said sum can be returned to the account of school revenue and be included in the next apportionment, and paid out with the next distribution of school revenue for the support of the schools of the State.

The accumulation of these balances in the State Treasury, and the diversion of so large an amount of money from the cherished object to which it has been so strongly and exclusively appropriated and set apart by law, has given great and general dissatisfaction to our people. It ought to be apportioned and distributed to the schools according to the law, in a prompt and faithful manner. If the whole or any part of this money had been available at the last or any previous apportionment, it would have been included in such apportionment and distributed to the schools. But over this matter, as very correctly remarked by our predecessor, "the Superintendent has no more control than he has over the revenues of Russia."

Much of the present condition of this unexpended portion of our school revenue has resulted from the want of prompt and reliable official statements from the several counties, of the amount of school revenue collected in each, and ready for distribution. The 99th section of the school law was evidently intended to provide the department with such statements in due time for the apportionment, but it is found to be insufficient and impracticable for that purpose, both in its provisions and its practical operation. It provides that the "county treasurers, at the time of making their annual settlement, shall furnish the Superintendent a statement of the income of the common school fund in their hands," but, at the date at which

the law requires the apportionment to be made, usually but few of the county treasurers have made their settlements with the Auditor of State, and consequently but very few of the statements required by that section have been furnished to the Superintendent. And a further difficulty in the way is, that when such statements are furnished they relate only to the income from the common school fund, and do not, as a general thing, include the entire school revenue ready for distribution, as they should, in order to make them of any value for the purposes of that section.

An amendment of that section of the law so as to secure prompt and full statements from county auditors, instead of treasurers, of the entire amount of school revenue available for distribution is desirable. It can then be taken into the apportionment and its payment into the State treasury, and the payment of it out for its proper object would be concurrent acts, and it is thought that it will prevent the accumulation of large additional balances and produce a salutary effect upon the schools.

It is a prevailing sentiment of the American people that education shall be free and generally diffused throughout the community, and obtainable by all. The primary basis on which this sentiment rests is the safety of the State, and the preservation of our free government. Uneducated men are regarded as a dangerous element in a free or republican government. With the people of this State we may say that this sentiment has become an established principle. The eighth article of the Constitution of Indiana recognizes this sentiment, and the basis on which it rests. The first section of that article makes it an imperative duty of the Legislature to provide, by law, for a general and uniform system of common schools, wherein tuition shall be without charge, and equally open to all. Giving effect to this principle of opening the common schools to every child in the State, and furnishing in them tuition without charge, is the grand and fundamental object of our educational system.

It contemplates that ample provision shall be made by the Legislature, in the way of revenue, to accomplish that object. No system can reasonably be expected to be satisfactory to the people unless it furnishes such tuition, in quantity and quality sufficient to supercede and render unnecessary any effort of private enterprise in that direction. If the revenue can be made sufficient, so that the schools can be thus kept open eight or nine months in the year, and be taught by thoroughly qualified teachers, and the revenue wholly and faithfully applied to its legitimate purpose, and the system administered by the officers connected with it, in an enlightened and economical manner, I cannot see how it can fail to give very general satisfaction to the great body of the people of the State. In most of cases where the former friends of the system have been alienated, it has been

done and caused by the insufficiency of revenue for tuition to accomplish the amount of utility which they had been induced to expect under the operation of the system.

The school revenues of the State, for tuition purposes, have never been sufficient to fully develop our present school system, and provide that full measure of school instruction which its friends have desired, and which is necessary for its greatest economy and efficiency. It is very obvious that three months' school per annum costs more in proportion to the educational progress which it accomplishes than nine months' school costs.

The entire school revenue distributed to the townships last May, by the county treasurers, averaged throughout the State but ninety-four cents per child. This revenue was derived as follows: twenty-six cents from the congressional township fund, twelve cents from the common school fund, and fifty-six cents from tax. The object of this distribution is to furnish a satisfactory amount of common school instruction to the 479,317 children of the State, for the current year. Its insufficiency in amount is apparent to all at a glance. We find from the report that but about one half of the above number of children have attended the common schools within the past year, which has the effect to give double the above amount per child, for each child attending school, or $1.80; a less sum than it will cost any of us to purchase three months' schooling for a child, anywhere else than in the common schools. If we could have added to this amount for the current year the entire amount of the balances which are lying back in the State Treasury, being about fifty-three cents per child, it would have helped greatly, but would still be insufficient to furnish a satisfactory amount of schooling. If we divide the total amount of the distribution by the number of schools within the State, we have but $68 to each school for the current year, a sum altogether insufficient to be satisfactory to the friends of common schools. Yet this sum, by the economy of its application, has kept the schools open to average 77 days. In every possible view in which we can present the subject the fact is present to the view that we cannot possibly make the revenue reach to accomplish, in a satisfactory manner, the object sought.

The additional sources of school revenue, which the Legislature, at its last session, provided, will mostly become available for the next apportionment, and be materially felt in the accomplishment of our cherished object. This additional revenue will probably reach $200,000, and even with this augmentation it will yet be insufficient, as it will average with this addition but $99 to each school. Partial as we may be to our present school system, however much we may esteem it above any other which has preceded it, we cannot be blind to the fact that if it is sustained as the permanent system of the State it must be done by pro-

viding for it permanent revenues, which shall be adequate to the wants of the people of the State.

The principle that the property of the State shall contribute to educate her children, has become a fixed one with our people, and forms a prominent feature in our system. I am not aware that the application of this principle is seriously opposed anywhere. The chief opposition to it which has anywhere been expressed to me is on account of the inadequacy of the revenues which the application of this principle has been made to yield, and the failure of the full amount provided to reach the object of their collection. The success of our school system may be said to be dependent upon two essential elements, to-wit: adequate *means* and adequate *supervision*. Let adequate means be provided, and let the supervisory provisions be amended so as to carry every cent to its proper object, and the system will become the pride of the State.

Our main dependence for sufficient revenue must necessarily be upon tax to be levied by the Legislature. Our school fund as now provided for by law is about six millions of dollars, about one half of which is now productive, and yields a revenue of about $180,000. The other portion of the fund yields but very little revenue at present. It is therefore evident that the additional revenue necessary to sustain the system must mostly come from an increase of tax. The question is not so much as to the source whence the necessary increase is to come, or the general approbation of and acquiescence in the measures requisite for its increase, as it is as to the amount of the increase.

With ninety-four cents per child enumerated, the schools, as before remarked, have been kept open 77 days. This is probably a little above an average result. I have made the enquiry of a great many school officers and friends of the schools, within the past year, as to what length of schools in each year would be satisfactory, and I think no one has replied that less than six months would be satisfactory, and very few have asked for more than nine months' school per annum.

An additional tax of one mill on a dollar of the taxable property will add to the revenue a little more than $435,000; with such an addition our future school revenue would be as follows:

From tax on property	$870,000
From tax on polls	100,050
From interest on school funds, common and congressional township	210,000
From licenses to sell intoxicating liquors	75,000
Total	$1,255,050
If 20 per cent. is deducted for delinquencies, &c.	251,010
It will leave net for schools	$1,014,040

This will give per child, according to the last enumeration, $2 03, and per school, according to last reports, $153 per annum. Can our present system be sustained in a satisfactory manner with less?

I present this matter thus, in advance of the session of the Legislature, to the end that it may receive some attention, and at the proper time receive the appropriate action of that body.

Whilst considering the means of increasing the school revenue it probably will not be amiss to consider what means may be adopted to secure a more strict enforcement of the law in relation to the augmentation of the school funds, and to render them productive, and to provide for their safety and prompt investment, and the application of the interest to the purposes to which it is appropriated by law, and to secure from the proper officers full and timely reports relative to these funds, and the revenue derived from them and of other school revenue.

In considering these things we should carefully discriminate between the school funds and the school revenues. The want of such discrimination has been a fruitful cause of error in the accounts and reports relating to said funds and revenues. The *school funds* consist of that which is set apart and appropriated by law to be invested so as to provide an income for the support of common schools. The *school revenue* is the income which is collected into the public treasuries for the use of the common schools, and consists of taxes, interest, rents and fees for licenses. Of the school funds, the law at present recognizes but two kinds or distinctions; the congressional township and the common school. All other names or distinctions of the funds are abolished. The former consists of the unsold lands which were reserved and granted to the congressional townships for school purposes, and the proceeds of the sale of such lands as have been sold. The latter consists of the moneys and sureties derived from the items enumerated in the second section of the school law, and from the sale of animals running at large. See chapter 4, page 103, section 7, revised statutes.

I will mention some of the imperfections which have been observed in relation to these matters, and suggest the measures which appear to be appropriate for their correction. The precise amount of the school funds, as now appropriated and set apart by law, can not be stated on account of imperfections in a large number of the reports which relate to them. They amount, as before stated, to about six millions of dollars, nearly all of which is understood to be very safely held or invested, and about one-half of the amount now productive of permanent annual income. The portion of these funds which is treated as productive, are entrusted to the counties for investment and management, and the law requires that they be kept at interest. The constitution and the law provides that they may be increased

but shall never be diminished, and that the several counties to which they are entrusted shall be held liable for their preservation, and the payment of the annual interest thereon at the rate established by law. The June reports, though many of them imperfect, show forty or fifty thousand dollars of these funds to have been then unloaned, or that the loans had been so suspended on account of their doubtful safety that they yield no revenue. The appropriate correction of the delinquency of interest resulting from these causes would be to provide a more summary way of enforcing against the counties their liability for the payment of the annual interest. The counties will not long continue to pay the interest upon suspended debts, or upon unloaned funds which may accumulate in the treasury. Such a provision would probably assist in carrying the whole of the school revenue collected to its appropriate object.

Several of the items enumerated in the second section of the school law, and forming a part of the common school fund which is created by that section, have never been productive. The money derived from the items to which I allude has never been so added to the fund as to produce any revenue. For instance, one of these items is the lands and other estates which shall escheat to the State for want of heirs or kindred entitled to the inheritance. The money derived from this provision is paid into the State Treasury, where it remains without adding anything to the productive school fund, or augmenting the school revenue in the way of interest. The same remark applies to the money derived from the sale of animals unlawfully running at large. An appropriate correction would probably be found in providing by law for the money derived from these items to be paid into the county treasury, instead of the State Treasury, and there added to the common school fund and invested as such, and be reported at the next annual report of the county auditor to this department as an increase of said fund. A similar disposition might be made of the balance of the swamp land fund. The item of taxes assessed on the property of corporations for common school purposes has never been separated from other school taxes and added to the common school fund. They have thus far gone to the account of revenue and as such been expended.

Some amendment ought to be made to the law, whereby the furnishing to this department of full, uniform and accurate reports of the funds and revenues belonging to the schools, and all other details and statistical matter necessary to an enlightened view of this subject should be provided for. The present manner of rendering these reports is very embarrassing, irregular, and often very unsatisfactory, both to the officers from whom reports are required, and to those to whom they are made. Forms have heretofore been appended to copies of the school

law, and published, but they have entirely failed to produce the prompt, accurate and uniform reports which are of vital importance to the success of the system. I have found, almost without an exception, an amount of zeal and good will amongst the school officers to render their reports and perform their school duties in a sufficient and satisfactory manner, yet some of these reports come too late, or are irregular, or deficient in substance, so as to render them of very little or no practical value to the officers to whom they are made, in subserving the object of their requirement. I respectfully suggest two measures, which appear to me to be necessary for the correction of the imperfections here mentioned. 1st, let there be furnished in due time by the department, to each person and officer who is required to report, suitable blank reports ready to be filled up and transmitted to the proper officer; and 2d, let there be a reasonable penalty provided for an unreasonable delay or failure to report, and for irregular or insufficient reports. The first of these provisions it is thought will almost, if not entirely, remove all complaint of the insufficiency or irregularity now so seriously complained of, and which is a very glaring defect in our system. The second provision will prevent the delays and failures to report in due time. The penalties should be reasonable, and the provisions for their enforcement simple and gentle, but certain, and without the annoyance to the parties of a suit in court. These reports are to the school system what the breath of life is to the animal system. Without them it cannot live, and its vitality is feeble in proportion to their delay and imperfection.

SCHOOL SUPERVISION.

In our school system as at present organized there is a gap in the supervision of its interests and affairs, which, if properly filled up, would contribute much to facilitate its workings, and assist in its administration. It is that which practically exists between the township trustees and the Superintendent of Public Instruction. The gap is now nominally and in part filled by the county Auditors, but practically it is very insufficiently filled. There is a portion of the duties relative to the schools now required to be performed by the county Auditors, from the performance of which they as a body would be very glad to be relieved.

The duties required of them by law in everything which relates to the care, management, investment, safety and collection of the school funds, and to the collection and distribution of the school revenues, and to the reports of the same, cannot by any means be separated from the office of the county Auditor. But all the other school duties now required of them, and many additional ones not now required of any officer, could, I think,

with propriety and great advantage to the schools and satisfaction to the Auditors, be assigned to a suitable officer on Board in each county, in such a manner that their performance would be inexpensive, and greatly facilitate the practical administration of the school system. These duties for performance might be assigned to the school examiners, who could be formed into a school Board for each county. An enlargement of the jurisdiction and increase of the duties of that office would cause the incumbents to feel themselves more closely identified with the school system, and increase their zeal in behalf of the schools. They would be likely to become more assiduous in the performance of their duties, and devoted to the interests of the schools in proportion as they become identified with their organization, and the keeping of them in motion. Such a provision would not be obnoxious to the charge of an increase of the number of school officers; but in the event of this suggestion being adopted the number of school examiners might, with safety, and without serious inconvenience to the teachers or injury to the schools, be reduced to one instead of three, which is now in most cases the number in each county. Judging from the popular favor with which the reduction in the number of township trustees was received throughout the State, we should expect that a similar reduction in this case would meet with similar favor.

School reports, as has been before remarked, form a vital part of the school system. In point of matter they should be ample, in detail accurate, in time prompt. Such reports can not be expected from the county Auditors. Their ordinary official duties aside from those which relate to the schools are very generally regarded as paramount to their school duties. With such duties they are occupied in their offices from day to day and hour to hour, and sufficient time is not left them to mingle with the subordinate officers and teachers, and to visit and inspect the schools, and accumulate the requisite data, and make these reports. They can not do it. One or the other class of duties will be neglected. The diversity between the duties relative to the school business and those relative to the ordinary civil business of the Auditor's office, and the want of contiguity of the fields of their performance, makes it impossible for one man to faithfully perform them all. Provide for it as we may by law some of these duties will be neglected.

If these duties should be assigned to the examiners many additional ones might be so assigned with increased advantage, the prompt and faithful performance of which might be expected. The examiners could be required to visit and inspect the schools of their respective counties, and introduce into them greater uniformity in their organization and management, and more strict conformity to all lawful regulations, and the most ap-

proved and successful methods of imparting instruction. They could probably save to the patrons of the schools in their counties more money annually than the pay for their services would amount to, by preventing the impositions which are being practiced by itinerant agents and other persons, by the introduction of unauthorized text books, which displace the genuine and authorized series, to the confusion of the schools. They could take charge of the general interests of teachers' institutes, and appoint the time, place, and length of their meetings, and preside at them or appoint some person to do so, and prescribe the order of business in them. They should as at present examine and license teachers. The proposed enlargement of their jurisdiction and increase of their duties would enable them better to discriminate in their examinations and licensing of teachers, so as to elevate the character and dignity of the profession and improve the schools. They could do much to extend the usefulness of township libraries. They might reeeive from the township trustees all their school reports, and report the enumeration of children to the county Auditor as the basis of his distribution of the school revenue. They might gather up the necessary information and data, and render ample and detailed reports to the Superintendent of Public Instruction, presenting a "view to life of the labors and deficiencies, the struggles and neglects, the enterprises and sacrifices, the difficulties and disadvantages, the successes and failures," through which the schools pass in the accomplishment of their important mission in the townships, towns and cities of the State. They should carefully observe and report as to the sufficiency or insufficiency of the rules and regulations adopted under the law for the management of the schools, to the end that they may be amended if necessary, and made uniform, and accomplish the greatest good. If reports thus full can be promptly rendered, with ample statistical tables, and be properly compiled, and made to form a part of the annual report from this department, and supplied to the local school authorities, they will be consulted with great interest and profit. The doings of one township, town or city will be compared with those of another, and thus furnish information to those who desire and need it, for rendering the system more practicable, and more completely uniform throughout the State. Such reports would materially assist the Legislature in judging of the sufficiency of the school system to work out and accomplish its design, and enable that body to legislate upon the subject intelligibly whenever legislation should be found necessary.

TEXT BOOKS.

It had become apparent that the books for instruction in reading, which had been introduced into the schools by the State

Board of Education in 1853, did not enjoy that measure of esteem and public confidence and approbation which was necessary to retain them in the schools. They were nearly out of the market, with but an apparently poor prospect of a sufficient supply to justify or admit of their continuance in the schools. It was therefore thought best, after having heard from many of the most prominent teachers of the State on the subject, to substitute for that series a more elaborate and improved one, which would, if possible, more completely meet the public want in that department of learning. After a careful and patient examination of six or eight different series of school readers, and due consideration of their respective merits, in obedience to the law, I submitted to the State Board of Education for their approval a revised list of text books, which amended the former list by substituting the series of readers known as the Goodrich series for the old Indiana readers, and made some other slight amendments and revisions. This list thus submitted was unanimously approved by the Board, and it was ordered by said Board that the books mentioned and named in said list be introduced into and used in the common schools of the State, as text books for instruction in the several branches of learning to which they relate. The list of text books thus introduced by the State Board of Education and made a part of the law for the government of the schools, is as follows, to-wit:

For instruction in Orthography.—McGuffey's Eclectic Spelling Book. Smith's Juvenile Definer.

For instruction in Writing.—Payson, Dunton and Scribner's Combined System of Rapid Penmanship.

For instruction in Reading.—Child's First Book, an illustrated Primer, by Goodrich. Goodrich's New First, Second, Third, Fourth, Fifth and Sixth Readers, edited and revised by Noble Bulter, A. M.

For instruction in English Language.—The American Dictionary, by Noah Webster, Unabridged Edition. Its addition to the furniture of every school is recommended.

For instruction in Spelling, Pronouncing and Defining.—The School Abridgements of said Dictionary, to-wit: The University Edition, Academic Edition, High School Edition, and Primary School Edition.

For instruction in English Grammar.—Introductory lessons in English Grammar, by Noble Butler, A. M. A Practical Grammar of the English Language, by Prof. Noble Butler, A. M.

For instruction in Arithmetic.—Ray's Arithmetic, parts I, II and III.

For instruction in Geography.—Cornell's series of Primary and Intermediate Geographies. Physical Geography, by Warren. Mitchell's series of Outline Maps, ten in number, accompanied by Camp's Key to said series.

For instruction in Anatomy, &c.—Cutter's Anatomy, Physiology and Hygiene, and Cutter's Anatomical Charts and Plates.

For instruction in Composition.—Brookfield's First Book of Composition.

For instruction in Punctuation.—Wilson's Elements of Punctuation.

For instruction in Book-Keeping.—Church's Simplified Book-keeping.

For instruction in Music.—The School Singer, by W. B. Bradbury.

For instruction in History.—Berard's History of the United States.

For instruction in Morals.—The Bible. Cowdry's Moral Lessons. Book of Thought, by Morrell, new edition.

The readers mentioned in the foregoing list are published by Messrs. Morton & Griswold of the city of Louisville, and have been edited, compiled and revised by Prof. Noble Butler, who is extensively and favorably known throughout the State, as the author of our excellent text books for instruction in English grammar, long since introduced and extensively used and approved in the schools of the State. The list was further amended by substituting the late pictorial edition of Webster's Unabridged Dictionary for the former edition, and by adding some school abridgements of said dictionary. The propriety of placing the pictorial edition of this work in every school is respectfully suggested to the township trustees. To the text books already introduced for instruction in geography has been added Mitchell's series of outline maps, and Camp's key to said series. The rapidity and force with which the eye conveys to the mind a knowledge of the form and motions of the earth, and of the locality and boundaries of the various physical and political subdivisions of its surface, from globes and out-line maps, commends their use in the schools for instruction in geography. The general introduction of them into the schools by the trustees will enable their teachers to impart to their pupils a very good knowledge of geography, at a much earlier age than it can possibly be done by the use of the ordinary text books in that branch of study, and thus save much of the valuable time of the pupil to be devoted to other branches of study during the subsequent school course. In this connection I will mention to the school trustees who desire to furnish their schools with globes that very complete and permanent ones are manufactured, of various sizes and prices, by Moore & Nines, at Troy, N. Y., a twelve inch sample of which (price $15.00,) was furnished by the makers to the office of the Superintendent of Public Instruction, which the school trustees, teachers and others are invited to examine.

TOWNSHIP LIBRARIES.

It is well known to all that the law which called into existence this excellent auxiliary educational force in this State was limited in its operation to two years, and after the expiration of that limitation it was revived and again limited to one year, which last limit expired with the year 1855. By the operation of the library provision of the school law, even with the limitations above mentioned, there were very good libraries, which were respectable in their number of volumes, placed in every township in the State. Most of these libraries have been extensively used in connection with the schools, and have done much to enlarge the measure of general intelligence amongst the mass of our people, and to form habits of reading and studiousness in the young persons of the State, nearly all of whom have easy access to these libraries.

Very little complaint as to the policy of the State in furnishing school libraries to the several townships has ever reached me. The most common complaint which is made to me in relation to them is for want of means to replenish the libraries with new and additional works, and to keep them in repair. In some of the townships I am informed that individuals have read nearly or quite every book in the library, and call loudly for more. The reports as to the number of volumes taken out of the several libraries within the past year are very defective, but enough is furnished to show that they are extensively used throughout the State.

In some communities a few of the books have been objected to on account of their alleged sectarian bias, and for that reason the libraries have been somewhat neglected. In other townships the trustees have not been fortunate in the location of the libraries and the appointment of librarians. Care should be taken to place them in some public place, where they will not annoy a private family, or unreasonably hinder the librarian from his ordinary avocations, and where all persons will feel at liberty to go for books, so that such as will may become the unrestrained and constant patrons of the library, and appropriate to their use much of its literary treasure.

A permanent annual revenue, small when compared with the original revenue for that purpose, is much needed for the support of this feature of our educational system. A bill for that purpose passed the Senate at its last session, by a vote of twenty-nine to nine, but failed to become a law.

STATE PRISON LIBRARY.

The Legislature, at its last session, appropriated five hundred dollars for the purchase of a township library for the use of the

State Prison—to be expended under the direction of the Superintendent of Public Instruction. In giving direction to the expenditure of this appropriation I prepared a catalogue of suitable works, selecting nearly all of them from the catalogues of the township libraries, and submitted a copy of it to four different firms, who were dealing extensively in books, and invited sealed proposals from them for furnishing the books mentioned in the catalogue. The proposal received from Robert Clark & Co., of Cincinnati, was thirty-one dollars lower than any other. The books were therefore ordered from that firm, and were by them faithfully delivered to the prison, under my personal inspection and to my satisfaction.

SINKING FUND.

Whatever residue there may be of the State Bank Sinking Fund, after discharging the other liabilities of the fund, is made by the constitution and laws to form a part of the common school fund of the State. The report of the Commissioners of the Sinking Fund for 1858 indicates this residue to be $2,780,604 36, and that it is variously and very safely invested. By an act of the General Assembly, at its last session, the Board of Commissioners of the Sinking Fund is required to distribute the residue of said fund to the different counties of the State, where it shall be held in trust as common school funds, and as such loaned in the same manner and made subject to the same conditions as other common school funds. In accordance with the rules prescribed by that act, said Commissioners have made two distributions. The first in September last, and amounting to about $145,000, and the other in January, and amounting the $84,574 86. The aggregate of both distributions is about $230,000, and has reached sixty-one of the counties of the State, and equalized in them the amount of common school fund held in trust by each, in proportion to their number of children listed for common school purposes, at $2 21 per child. These distributions are to be added to the common school fund and regarded in every respect as a part thereof, and as such to be invested and held subject to all the regulations applicable to said fund; the entire income of which is appropriated in the most solemn and positive manner, by the constitution and the statutes on the subject, to be applied exclusively to furnishing tuition in the common schools of the State, "and to no other purpose whatever." This income goes to the account of common school revenue, and is annually apportioned to the schools and distributed to pay for tuition in them. These distributions of the Sinking Fund lawfully add more than $16,200 to the school revenue, which will be available for the distribution in May, 1860.

SCHOOL YEAR.

There is no time fixed by law as a school year. It is left optional in some instances for the school officers to include in their reports whatever time they please, and thereby such reports and the statistics which they furnish are reduced in value, and, in some instances and for some purposes, they are nearly useless, on account of the diversity of time to which they relate. A provision by which the school year should be made to commence on a certain day, say the first of October or the first of April annually, would, I think, be of practical utility in securing accuracy in reports, and more uniform and satisfactory data, for the comparison of results and to guide our judgment in determining as to the sufficiency of our system to work out and accomplish its great design.

SCHOOL DIRECTORS.

The office of School Director, as now provided for by law, is a very important one to the schools, and ought to be more carefully guarded or restricted. Directors are often chosen with great irregularity, at school meetings at which but a small portion of the persons forming the school are in attendance. The law does not give them any pay for their services; the office is therefore regarded as a burden which but few suitable persons are willing to take upon themselves. The consequence is that the many and important duties of that office are assigned to very unsuitable persons, to the great injury of the schools. The directors are empowered to preside at school meetings; they determine who belong to the schools, and who are entitled to take part in their meetings and control their proceedings by vote or otherwise. They act as the organ of communication between the inhabitants forming the school and the township trustee. They have charge of the school house and property belonging thereto, subject to the order of the trustee. They make temporary repairs to the school house, furniture, and fixtures, and provide fuel, and report the cost to the trustee for payment. They are required to visit their schools from time to time and exclude refractory pupils. In many instances they determine who may attend the schools. They are empowered to employ and dismiss teachers, and hear and determine petitions for their dismissal. They draw orders on the township treasurers for the payment of teachers, and other expenses of the school, amounting to near three-quarters of a million of dollars annually. They have the power to render their school eminently successful or complete failures. Questions of jurisdiction between directors and trustees sometimes arise to the great injury of the school. They sometimes employ teachers in advance of the apportionment of the money to their schools by the trustee, and

for a greater length of time than their apportionment of school money will pay their teacher, and thus endeavor to expend unlawfully for the current year the money which belongs to succeeding years. They sometimes employ teachers regardless of the provisions of the 145th section of the school law, and the question often comes up from the township trustees whether they are liable or have the right to pay to teachers thus unlawfully employed the distributive share of school money apportioned to the school for which the teacher is thus unlawfully employed. Many complaints have reached me of the employment of unqualified teachers, in violation of the 145th section above referred to. These complaints sometimes come from examiners, teachers, patrons of the school, and even pupils sometimes complain that they are retarded in their educational progress by the inability of their teachers to give instruction in the branches of learning which they are pursuing.

The Directors give no official bonds, they are not required to render any official report or any account whatever, of any part or portion of their doings. There is no appeal from their decisions, or other means provided by law whereby their acts can be reviewed and their errors corrected. There are no penalties provided against them for violations of the law, or neglect, or breach of official duty. Some way of escape from the effects of their errors ought to be provided by law. Their powers ought to restricted, or the directors ought to be in some way made accountable for the abuse of such powers as are entrusted to them, and reasonable compensation for their services provided for them.

EXAMINATION OF TEACHERS.

Any course of policy on the part of school officers which places in the school room an incompetent person as teacher, usually has the effect to exclude from the school much which is desirable, and well worth introducing and retaining. Schools are too often imposed upon by the employment of teachers who have not been subjected to an examination by the county school examiners, and required to procure a certificate of qualification to teach. The law forbids the employment of a teacher unless of good moral character, and possessed of a certificate of qualifications, as provided by law. Upon these certificates we must depend, to a great extent, for safety from imposition by unqualified teachers. If the school examiners will properly discriminate in granting them, and the directors exact them in every case of application for employment, they will become what the law designed them to be—safeguards from imposition, and will do much to prevent the extensive complaints now urged in this behalf.

Many of the school examiners have been at a loss as to the proper construction of the several sections of the school law

which relate to this subject and indicate their duty. These sections should be so construed as to harmonize with each other, and, at the same time, accomplish the object of the law, which was to protect the school from imposition by incompetent teachers. The following are, in substance, the provisions of the law on the subject:

Section 105. School meetings shall have power to determine what branches they desire shall be taught in their schools.

Section 107. As amended in 1859, acts of that year, page 179, section 3. A majority of the inhabitants attached to a school, may designate a teacher they wish employed.

Section 145. No teacher shall be employed until he shall have procured a certificate of qualifications as provided by law.

Section 147. School examiners shall examine all applicants, and if found qualified, shall license them, at discretion, for any time not exceeding two years.

Section 148. Licenses shall specify the branches which the person licensed is qualified to teach.

Section 149. No person shall be licensed as a teacher, unless possessed of a knowledge of Orthography, Reading, Writing, Arithmetic, Geography, and English Grammar.

From these provisions we may conclude:

1st. That no determination of a school meeting, as to what branches shall be taught in their schools, as provided for by section 105, or designation of a teacher, as provided for by section 107, as amended, can authorize a violation of sections 145, 147 and 149. That such determination, as to branches to be taught or designation of teacher to be employed, must be done, with due respect for the other provisions of the law, and so as to facilitate instead of obstruct their operation.

2d. That no teacher can be lawfully employed in a common school, unless he, or she, shall have procured a license to teach, which shall be in full force, and unexpired, by its own limitation, at the date of the employment.

3d. No person can be lawfully licensed as a teacher unless possessed of a knowledge which, in the opinion of the Examiner, is sufficient, in kind and quantity, to enable such person to teach and give instruction in each of the six branches of learning mentioned in section 149.

4th. All licenses should indicate upon their face the branches of learning which the person licensed is qualified to teach, not less than the six branches mentioned in section 149, and should, also, by its range of limit, not exceeding two years, indicate the degree of qualification possessed by the person licensed.

The operation of teachers licenses is not confined or restricted to the county in which they are granted. Neither is there any power given by law to revoke such licenses. It would, I think, be very proper to provide for both.

The school examiners are required by law to examine all applicants for license as teachers of common schools, and if found qualified to license them, and report their proceedings annually to the State Superintendent of Public Instruction. Reports have been received from examiners of twenty-five of the counties, they being from twenty-nine of the two hundred and fifty examiners of the State. Many of the reports which have been received have been found to be very informal and deficient, and furnishes another very striking instance of the necessity of supplying the officers with blanks from this Department for all official reports required by law to be made to it. These reports include different portions of time, and indicate the licensing of teachers as follows:

	Males.	Females.	Total.
For two years	107	12	119
For eighteen months	23	3	26
For twelve months	324	25	459
For six months	111	11	122
Less than six months	72	5	77
	637	56	693

NORMAL SCHOOLS.

The chief object of Normal schools is to instruct their pupils in the science and practice of teaching all the branches of learning pursued in our common schools, and to qualify them for the greatest possible usefulness in the teacher's profession. It is of the first importance in point of economy in the expenditure of our school money that it is spent upon teachers who are thoroughly qualified as such. I hear from no county in the State on this subject, but what I hear complaints of the want of qualified teachers. Since the people, by the Constitution, have surrendered to the State and her General Assembly the whole business of providing for the education of the children of the State by a uniform system of common schools, it has been very generally understood to be her duty to provide for that object by schools, which, in point of excellence, cannot be surpassed by any private schools. Her teachers should be of the first class, educated and trained especially for the profession, who enter it with a degree of zeal and understanding which will enable them to command success.

Our exclusively public system of common schools cannot be expected to long enjoy the confidence of our people, unless it is made fully equal, or superior, in kind, to any system which can be provided by private effort. We cannot be too strongly impressed with the fact that in order that our school system should retain that measure of public confidence which is necessary for

its perpetuity, its schools must be made as good as the best private schools, and kept open a reasonable portion of the time. What is necessary for this? We can but answer, that, next to a sufficient revenue, competent teachers is the great necessity.

I fear that we will never realize that completeness of qualification of teachers which we desire, and which is due to our system, and demanded by strict economy, and all important for the success of the schools, and which has become a first and commanding necessity, until the State adopts and carries into effect some plan for normal school instruction for her teachers, by which she can properly educate, train and improve them in the science and practice of teaching, for the better supplying her common schools. Until the State effectually moves in this matter we cannot expect that very many of the eight or ten thousand teachers annually employed in the schools of the State will stand forth in the foremost rank of their profession as its finished ornaments.

For light and information upon this subject we look to our sister States, where normal schools or some modification of them have been established or made available by State authority, for the accomplishment of this object. In such States normal schools are no longer an experiment, but they are fully established, and form an indispensible and highly satisfactory part of their educational system. Whatever State has undertaken the management and carrying forward of a system of common schools, and made commendable educational progress therein, and acquired a reputation for the excellence of their schools, has found normal schools to be a necessity, and have established and brought them into use by State authority. The imperative law of necessity requires and justifies their establishment and organization. The alternative is the languishing of the schools, in a kind of half living and half dead condition, for want of "live teachers" to introduce into them more invigorating exercises. Shall we content ourselves with this alternative?

ENCOURAGEMENT OF AGRICULTURE.

The convention which formed our organic law for a free government did not fail to declare the things essential for its preservation, and enjoin the duty of their encouragement upon the General Assembly. The first section of the eighth article of the Constitution reads as follows: "Knowledge and learning, generaly diffused throughout a community, being essential to the preservation of a free government, it shall be the duty of the General Assembly to encourage, by all suitable means, moral, intelectual, scientific and agricultural improvement, and to provide, by law, for a general and uniform system of common schools, wherein tuition shall be without charge, and equally open to all." The General Assembly has, from time to time

taken important steps towards the discharge of this duty. It has provided for the general diffusion of knowledge and learning throughout the community by raising a school revenue, providing for free schools, and public libraries, and agricultural Boards and Societies, and thus encouraged by means very suitable in kind, moral, intellectual, scientific and agricultural improvement. The encouragement already provided by the General Assembly has done much towards the accomplishment of this favorite object of the Convention—the general diffusion of knowledge and learning throughout the community, and the preservation of our free government.

It is proverbial that a free government sits easily upon an agricultural people, and that, with such a people, its institutions are most safe. Agriculture is conceded by all to be a prominent interest in the State of Indiana. A large portion of her people are employed in its pursuits, and a large portion of her wealth is also thus employed. That interest yields bountifully to her revenue, and contributes largely to her general strength and prosperity, and to the happiness of her people. These facts would appear to invite for agricultural improvement a large share of Legislative encouragement. The kind and measure of such encouragement is, of course, for the General Assembly, under the Constitution, to determine.

The section of the Constitution above quoted appears to contemplate that agricultural improvement should receive encouragement at the hands of the State in connection with her system of common schools, the general diffusion of knowledge and learning, and her great educational interests. That it should be introduced as a branch of learning, and its rudiments, at least, be taught in the higher departments of our common schools. Instruction in the science and also in the art of agriculture I think could, with great propriety, be made an important feature in any provision which the State may see fit to make for normal schools for the preparation and training of teachers. Thus the study of that branch of learning could be very pleasantly and profitably introduced into the schools, and would probably result in the establishment of an agricultural college, to which students from advanced classes in the common schools who wish it, can be admitted, and receive a full and thorough course of instruction in agriculture and its kindred studies, which will enable them to enter upon their favorite calling in such an enlightened and practical manner as to secure to themselves the greatest measure of utility for their efforts, and to the State a corresponding benefit.

PRIVATE INSTITUTIONS OF LEARNING.

I have no important information to communicate relative to the colleges and other private institutions of learning established

and in operation within the State. The law does not require them to report to this Department. Any detailed inquiries in relation to them are liable to be regarded by the person of whom they are made as more or less troublesome, unauthorized and intrusive, and it is at the option of the persons who have the management of the affairs of such institutions to furnish or withhold, at pleasure, the information sought. The effect of this is to leave the people, the Legislature and this Department very insufficiently informed as to the educational facilities at command within the State.

If consistent with the private and vested rights of such institutions provision ought to be made by law for annual or biennial reports from them to this Department. If such a provision would not be consistent with their rights the present law on the subject evidently ought to be repealed. Such reports can probably be made eminently and mutually useful to the people of the State and the institutions making them. They would augment the school statistics and information in relation to such institutions, in a manner and to an extent very necessary to enable the people of the State and the Legislature to better realize and appreciate their educational efforts, and estimate more accurately the extent of their assistance in carrying forward the great school enterprise in which the State is embarked.

It is desirable that no conflict shall exist between these higher institutions of learning and the more humble common schools. They should receive the fostering care of the State to the end that their greatest capacity for good may be developed and brought into requisition for the general diffusion of knowledge and learning throughout the community. They are highly necessary in order to secure that completeness of scholastic polish which is deemed essential in the learned professions, and desirable in the man of extensive and diversified business.

It is not claimed for or expected of the common schools to apply to their pupils that high degree of literary polish which is expected to be communicated by the College or the University. But they may be expected to become, as it were, preparatory departments of the colleges, in which young men and young ladies may receive that suitable measure of instruction which shall be preparatory to their successful entrance upon a regular college course of instruction, or upon the active business of life, as their inclinations may dictate.

THE NECESSITIES OF OUR SYSTEM.

For the subsequent success of our school system there appears to be three great necessities, which are of importance in the order in which they are stated.

1st. Such an increase of the school revenue as will provide for and keep the schools open a length of time which will be generally satisfactory.

2d. Normal schools, or some modification of them, for the improvement of the professional character of common school teachers.

3d. Such a reasonable amendment or revision of the school law as may be necessary to remove its apparent discrepancies, make its administration more uniform, certain and effective, and carry the whole of the revenue which it provides more direct to the schools.

In relation to these necessities enough has probably been said in the foregoing pages to plainly indicate them, and to intimate what measures are regarded as appropriate for their relief. More mature plans for the relief of these and minor necessities will probably be duly presented to the General Assembly at its next regular session.

SAMUEL L. RUGG,
Sup't. Pub. Instruction.

INDIANAPOLIS, Feb. 16th, 1860.

INDEX.

Agriculture—
Encouragement of, in connection with schools 23

Appendix—
1. Abstract of school reports 27
2. Summary of said reports 90
3. Tabular statements of apportionment of school revenue 94
4. Abstract of reports of School Examiners 96

Children—
Enumeration of, in the State 5
Gain since November, 1858 5
Number attending public schools 5
Number attending private schools 5
Amount of revenue apportioned according to 8

Directors, School—
Irregularly chosen 19
Duties of 19
Amendment of the law relative to 20

Districts, School—
Number of, in the State 5
Average number of children in each 5

Examination of Teachers—
Law and suggestions relative to 21
Number of licenses reported 22

Examiners, School—
Reports of part of 22
Increase of duties and enlargement of jurisdiction of recommended 13

Funds, School—
[See School Funds.]

Funds, Sinking—
[See Sinking Fund.]

Globes and Outline maps 16

Guessing at the amount of school revenue 6

High Schools—
Number of 5
Number of Teachers employed in 5

Libraries—
Township 17

Library—
State Prison 17

Necessities of our school system 25

Normal Schools—
Establishment of recommended 22
One of the necessities of our system 26

Prison Library 17

Private institutions of Learning, Colleges, &c 24

Private Schools—
Number of pupils attending 5

Reports—(Due in November, 1859.)
Received from each county 5
Imperfection of 10
Show unproductive funds 11
Of funds and revenues should be better provided for 11
Penalty for failing to make sufficient, recommended 11
Time for making, ought to be definitely fixed 19
Not required of School Directors 20
Of Examiners 22
Form a vital part of the school system 13
Not required of private institutions of learning 25

Schools—
Average length of 5
Unequal length of 5
What length of will be satisfactory 9
Greater uniformity in the management of desirable 13

School Directors—
Office of 19
No pay provided by law for services of 19
The duties of 19
Amendment of the law relative to recommended 20

School districts—
The number of, within the State 5

School Examiners—
The law and suggestions indicating their duty 21
Enlargement of investigation of, recommended 13
Reduction in the number of, suggested 13
Additional duties may be assigned to 14
Reports of 22

School funds—
Amount of 9
Suggestions relative to augmentation of 10
Suggestions as to the safe and prompt investment 10
Discrimination between school funds and school revenues 10
Of what they consist 10
Their precise amount cannot be stated 10
Entrusted to counties for investment 10
Counties liable for preservation of 11
A large amount of unproductive 11
Amendment recommended to secure reports of 12
Addition to from Sinking Fund 18

School houses—
Number of, erected within the year 6
Cost of, erected within the year 6

School revenue—

Discrimination between revenue and funds..... 10
Apportionment of to counties..... 93
Amount of, expended for tuition..... 5
Amount of, per child..... 8
Never sufficient to develop the school system..... 8
Increase of, recommended..... 9

School supervisors—

Practically insufficient..... 12
May be assigned to Board of Examiners..... 13
Additional, recommended..... 14

School teachers—

Number of, employed in the schools of the State..... 5
Average compensation of..... 5
Examination and licensing of..... 20
Complaints relative to incompetency of..... 22
Improvement of..... 23

School tax—

For tuition, necessity for an increase of..... 9
For building, furnishing, repairs and fuel..... 5

School year—

No time fixed for commencement of..... 19

Sinking fund—

Amount and distribution of..... 18

State Prison library..... 17

State Board of Education..... 8

Taxable property of the State to contribute to educate her children..... 9

Township Libraries—

Their use..... 17
Suggestions relative to their location, &c..... 17
Permanent annual revenue for them..... 17

Text Books—

List of..... 15

Tabular statements—
